FOCUS FOR REVISION – PRACTICE = SUCCESS!

GLOBAL	From the exam specification	Short questions	Long questions
HAZARDS		(1-4 marks)	(6-8 marks)
1.1 How do	a. Why do we have weather extremes?	- Which climate zone is found	- Explain how human factors can
plate		where Hadley and Ferrel cells	make the effects of drought
tectonics	• Outline of the global circulation system including the effects of high and low pressure	meet? (1 mark)	worse. (6 marks)
shape our	belts in creating climatic zones.		
world?	• How the global circulation of the atmosphere causes extremes in weather conditions	-Why do deserts form 30	
	in different parts of the world.	degrees North and South of	
	• The extremes in weather conditions associated with wind, temperature and precipitation in contrasting countries.	the equator? (4 marks)	
	• The distribution and frequency of tropical storms and drought, and whether these	-Draw a diagram to show the	
	have changed over time.	formation of a tropical storm.	
	 Outline the causes of the extreme weather conditions associated with tropical storms. Outline the causes of the extreme weather conditions of El Niño/La Niña leading to drought. 	(3 marks)	
	b. When does extreme weather become a hazard?	-Describe and explain two	-Explain how an extreme weather
		effects of a hazardous	event you have studied was
	• Case studies of two contrasting natural weather hazard events arising from extreme weather conditions	weather event you have studied. (4 marks)	caused by a combination of human and physical factors.
	Typhoon Haiyan		(Boscastle) (8 marks)
	UK Drought		
	• For each chosen hazard event, study the place specific causes (including the extreme weather conditions which led to the event), consequences of and responses to the hazard.		 Evaluate the success of the responses to a drought event you have studied. (Australia drought). (8 marks)

1.2 How do plate tectonics shape our world?	 a. What processes occur at plate boundaries? The structure of the Earth and how it is linked to the processes of plate tectonics including convection currents. The processes that take place at constructive, destructive, conservative and collision plate boundaries as well as hotspots. How the movement of tectonic plates causes earthquakes, including shallow and deep focus, and volcanoes, including shield and composite. 	 -What type of plate margin is found between the UK and the USA? (1 mark) -With the help of a diagram explain the processes that occur at a collision plate boundary. (4 marks) -Explain how a hotspot forms. (4 marks) 	
	 b. How can tectonic movement be hazardous? A case study of a tectonic event that has been hazardous for people, including specific causes, consequences of and responses to the event. 	-Draw an annotated diagram to explain why earthquakes occur at conservative plate boundaries. (4 marks)	 With the help of a hazardous event you have studied explain the difference between the immediate and long term effects. (8 marks) (Haiti) Evaluate the success of the responses to a hazardous event you have studied. (6 marks) (Haiti)
	 c. How does technology have the potential to save lives in hazard zones? How technological developments can have a positive impact on mitigation (such as building design, prediction, early warning systems) in areas prone to earthquakes 	 -What makes predicting an earthquake difficult? (3 marks) -How is media used to save lives in hazard zones? (4 marks) 	- To what extent do you agree with the statement 'We will never predict earthquakes'. (8 marks)

CHANGING	From the exam specification	Short questions (1-4 marks)	Long questions (6-8 marks)
2.1. What evidence is there to suggest climate change is a natural process?	 a. What evidence is there for climate change? The pattern of climate change from the beginning of the Quaternary period to the present day. The range and reliability of evidence relating to climate change including evidence from sea ice positions, ice cores, global temperature data, paintings and diaries. 	 Figure 1 and 2. Mastodons were widespread across the USA and Europe during cold glacial periods Study figures 1 and 2. How can fossils provide useful evidence about past climates? (3) Compare the reliability of two sources of evidence of climate change (4) 	"Proxy data are not reliable sources of paleoclimatic information" To what extent do you agree with this view? (6)
	 b. Is climate change a natural process? Outline the causes of natural climate change including the theories of sun spots, volcanic eruptions and Milankovitch cycles. Investigate the natural greenhouse effect and the impacts that humans have on the atmosphere, including the enhanced greenhouse effect. 	 What is meant by the term 'volcanic winter'(4) What is the enhanced Greenhouse effect? (4) What are sunspots and how do they affect the Earth's climate? (4) 	Discuss the view that climate change is a purely natural process (8)
	 c. Why is climate change a global issue? Explore a range of social, economic and environmental impacts of climate change worldwide such as those resulting from sea level rise and extreme weather events. The impacts studied should relate to the 21st century. Explore a range of social, economic and environmental impacts of climate change within the UK such as the impact on weather patterns, seasonal changes and changes in industry. The impacts studied should relate to the 21st century. 	- Outline two possible effects of climate change on extreme weather across the planet over the next 50 years (4)	Assess whether the social impacts of climate change experienced in the UK in the 21st Century are greater than the environmental impacts (8)

DISTINCTIVE LANDSCAPES	From the exam specification	Short questions (1-4 marks)	Long questions (6-8 marks)
3.1. What makes a landscape distinctive?	 a. What is a landscape? How the concept of a landscape can be defined, including the differences between built and natural landscapes. 	What are the main characteristics of a 'built' landscape (2) Look at Figure A (of a coastal landscape) and annotate the landscape elements that you can see (2) Briefly describe what is meant by a natural landscape (1)	
	 b. Where are the physical landscapes of the UK? Overview of the distribution of upland, lowland and glaciated landscapes in the UK. Overview of the characteristics of these landscapes which make them distinctive including their geology, climate and human activity. 	Describe the distribution of upland and lowland landscapes in the UK (4) Explain how geology can affect the landscape that forms on the surface (3) Compare land uses in upland and lowland areas in the UK (4)	 Explain how the geology of the UK gives rise to distinctive landscapes. Refer to one or more named rock types (6) Describe how the climate of the UK gives rise to distinctive landscapes. Refer to named locations in your answer (6)
3.2. What influences the landscapes of the UK?	 a. What physical processes shape landscapes? The geomorphic processes that are involved in shaping landscapes, including weathering (mechanical, chemical, biological), mass movement (sliding, slumping), erosion (abrasion, hydraulic action, attrition, solution), transport (traction, saltation, suspension, solution), deposition. The formation of coastal landforms including headlands, bays, cave, arch, stack, beach and spit. The formation of river landforms including waterfall, gorge, v-shaped valley, floodplain, levee, meander, ox-bow lake. 	Outline the role of erosion in shaping a headland. Refer to a named example you have studied (4) Explain the stages in the formation of an arch (4) Explain how freeze-thaw weathering could cause the cliffs shown in the figure to break up (4) Describe a process of weathering, other than freeze-thaw, that can affect landscapes (2) Explain how constructive waves contribute to deposition on the coast (3)	With the aid of an annotated diagram, explain what is likely to happen to the landform in Figure B (of an arch) over the next 100 years (6) Explain how an oxbow lake could form on the river pictured (6)

	Describe the formation of one river landform	
	you have studied. You can use diagrams to	
	help you (4)	
	Study Figure 2, a photograph of a coastal area.	
	Use evidence from Figure 2 to suggest how	
	this coastal area may change in the future.	
	Explain your answer (4)	
	Suggest one reason for building embankments	
	along a river (1)	
	0 ()	
	Explain how embankments could influence	
	geomorphic processes in a river (3)	
b. What are the characteristics of your chosen	For a named coastal landscape in the UK,	For a named coastal landscape, assess the
landscapes?	explain how the landscape was formed (4)	influence of weather and climate on the
		landscape (6)
• Case study of two landscapes in the UK, one	For a named river basin in the UK, describe its	
coastal landscape and one river basin, to	location. You could draw a labelled sketch	Discuss the factors that need to be considered
include the study of:	map to help you (4)	in managing a coastal landscape (6)
- Its landforms created by geomorphic	For one landform in a named river basin	For a river basin you have studied, explain
processes	evolain how geomorphic processes have led to	how human activity has affected the
- the geomorphic processes operating at	its formation (4)	geomorphic processes in this landscape (6)
influenced by geology and climate		
- How human activity, including	With reference to a landscape you have	For a river basin vou have studied. discuss
management, works in combination with	studied, explain what makes it distinctive (4)	whether human activities in the river basin
geomorphic processes to impact the		help to increase of reduce the risk of flooding
landscape.		(8 + 3 SpaG)
		For a named river basin in the UK, assess
		whether the negative impacts of human
		activity on the landscape are greater than the
		positive impacts (8+3SpaG)

b. What are the characteristics of your chosen	Define the erosional landforms in one coastal
landscapes?	they were formed (6)
Consistently of two landscapes in the UK and	they were formed (6)
 Case study of two landscapes in the UK, one coastal landscape and one river basin, to include the study of: its landforms created by geomorphic processes 	Assess how far the impacts of human activity on one coastal landscape have been negative (8 + 3 SpaG)
 the geomorphic processes operating at different scales and how they are influenced by geology and climate how human activity, including management, works in combination with geomorphic processes to impact the landscape. 	 With reference to a stretch of coastline you have studied: a) Explain the processes of erosion affecting it (3) b) Explain how the different groups of people who use the coastline may have conflicting views on how it should be used (4) c) Name three different methods used to protect the coastline from erosion
	 With reference to a river that you have studied: a) Describe the geomorphic processes that operate in the upper course of the river (4) b) Explain how human activity affects the river's natural flow (3)

ECOSYSTEMS	From the exam specification	Short questions	Long questions
		(1-4 marks)	(6-8 marks)
4.1. Why are natural	a. What are ecosystems?	- Define the term ecosystem (2)	 Explain how animals and plants have adapted to the desert
ecosystems important?	 Understand the concept of an ecosystem as being the interdependence of climate, soil, water, plants and animals. Outline the global distribution of polar regions, coral reefs, grasslands, temperate forests, tropical forests and hot deserts. Overview of the climate, flora and fauna within these ecosystems. 	 Describe the global distribution of tropical rainforests (4) Outline the main differences between the climate of tropical and temperate forests (4) State two species of animal found in coral reefs (2) 	ecosystem. (6)
4.2. Why should tropical rainforests matter to us?	 a. What biodiversity exists in tropical rainforests? The distinctive characteristics of a tropical rainforest ecosystem, including the climate, nutrient cycle, soil profile and water cycle. The interdependence of climate, soil, water, plants, animals and human activity in tropical rainforests. 	 Explain how the flora of hot deserts are adapted to their climate (4) Describe the typical soils found in the TRF (3) Explain why ecosystems are often called 'interdependent' (4) 	- Explain how people living in the tropical rainforest are interdependent with the soil and plants. In each case mention one way in which people use it and the impact this has on the ecosystem (6).
	 b. Why are tropical rainforests being 'exploited' and how can this be managed sustainably? Explore the value of tropical rainforests through the study of their goods and services. Human impacts in the tropical rainforest from activities such as logging, mineral extraction, agriculture and tourism. A case study to illustrate attempts to sustainably manage an area of tropical rainforest, such as ecotourism, community programmes, biosphere reserves and sustainable forestry, at a local or regional scale. 	 Name one human activity in the TRF and describe it (2) Explain the impact of that activity (4) Describe how the TRF provides valuable services. (4) 	- Using a named example of a TRF you have studied outline the need for sustainable management and evaluate one specific strategy that has been used (8).

4.3. Is there more to polar environme nts than ice?	 a. What is it like in Antarctica and the Arctic? Outline the distinctive characteristics of Antarctica and the Arctic, including climate, features of the land and sea, flora and fauna. The interdependence of climate, soil, water, plants, animals and human activity in either the Antarctic or the Arctic polar region. Explore a range of impacts of human activity on either the Antarctic or the Arctic research, indigenous people, tourism, fishing, whaling and mineral exploitation. 	 Outline the impacts of human activities on either the Arctic or Antarctic ecosystems (4) Describe the ways in which climate affects soils and people in the Arctic (4) Suggest three ways in which the polar environments are different to each other (3) 	- Outline 2 modern human activities in the Arctic or Antarctic and evaluate their impact on the ecosystem (6).
	 b. How are humans seeking a sustainable solution for polar environments? A case study to examine one small-scale example of sustainable management in either the Antarctic or the Arctic such as sustainable tourism, conservation and whaling. A case study to examine one global example of sustainable management in either the Antarctic or the Arctic by investigating global actions such as Earth Summits or the Antarctic Treaty. 	 Define sustainable management (2) Describe one global scale example of sustainable management in either the Arctic or Antarctic (4). Suggest two unsustainable practices that are prevented by the Antarctic Treaty. (2) 	- Using a small scale example you have studied explain how sustainable management is used in the Arctic or Antarctic (6).

URBAN FUTURES	From the exam specification	Short questions (1-4 marks)	Long questions (6-8 marks)
5.1. Why do more than half the world's population live in urban areas?	 a. How is the global pattern of urbanisation changing? How urban growth rates vary in parts of the world with contrasting levels of development. Outline characteristics of world cities and megacities and their changing distribution since 1950. 	 Define the following terms: urbanisation, megacity, word city. (3) How has the global location of megacities changed since the 1950s? (2) Suggest some advantages and disadvantages of megacities for the people who live in them. (4) Why do some cities grow in status? (4) Describe the difference between a megacity and a world city, giving a named example of each. (4) 	 Why do some cities grow faster than others? (6) How have the characteristics of world cities and megacities changed since the 1950s? (8)
	 b. What does rapid urbanisation mean for cities? Understand the causes of rapid urbanisation in LIDCs, including the push and pull factors of rural-urban migration and internal growth. Investigate the consequences of rapid urban growth in LIDCs. Understand the causes and consequences of contrasting urban trends in ACs, including suburbanisation, counter-urbanisation and re-urbanisation. 	 Identify three typical city functions and for each one suggest a city that is well known for that function. (3) State the three factors that account for why urban areas grow. (3) Explain how the growth of squatter settlements is connected with the rapid growth of cities. (4) Explain how the population of cities in LIDCs and EDCs grows by rural-urban migration. (3) Explain how the population of cities in LIDCs and EDCs grows by natural growth. (3) Describe and explain the process of suburbanisation. (4) Describe and explain the process of re-urbanisation. (4) 	 To what extent is natural growth more of a factor than rural-urban migration in explaining LIDC urban growth? (8) Assess whether the consequences of rapid urban growth in LIDCs have been more positive or negative. (8)

DYNAMIC DEVELOPMENT	From the exam specification	Short questions (1-4 marks)	Long questions (6-8 marks)
6.1. Why are some countries richer than others?	 a. What is development and how can it be measured? Definition of 'development' and the ways in which countries can be classified, such as AC, EDC and LIDC. Global distribution of ACs, EDCs and LIDCs. Economic and social measures of development, such as GNI per capita and Human Development Index, and how they illustrate the consequences of uneven development. 	 Name one measure of social development. Describe how it shows how developed a country is (3) What is the difference between absolute and relative poverty? (2) Describe the distribution of LIDCs around the world. (4) 	
	 b. What has led to uneven development? Outline the human and physical factors influencing global uneven development. Explore the factors that make it hard for countries to break out of poverty, including debt, trade and political unrest. 	 How can physical factors such as natural resources affect how developed a place can become? (3) What is meant by debt? (1) What is the impact of political instability on development? (4) 	- Examine the causes of uneven development (8).
6.2. Are LIDCs likely to stay poor? This enquiry question is studied through one case study of an LIDC to answer sub- questions a, b and c.	 a. How has an LIDC developed so far? Overview of the economic development of an LIDC, including influences of population, society, technology and politics, particularly in the past 50 years, or post-independence. Explore whether Rostow's model can help determine the country's path of economic development. The extent to which the relevant Millennium Development Goals have been achieved for this LIDC. Investigate how the LIDC's wider political, social and environmental context has affected its development. 	- The Rostow model demonstrates how countries can develop over time. Describe what is meant by the 'take off' stage. (4)	 For a named LIDC or EDC describe its level of development and examine the social, political and technological influences affecting its development. (8) Assess the extent to which a named LIDC you have studied has achieved the Millennium Development Goals. (6)

ce its development?		
rade, such as potential reliance on a single, w this influences development. f trade and Trans National Company (TNC) intages of international aid or debt relief	 Describe how aid can benefit an area. (3) What are transnational companies? Give an example of one. (2) Self-help schemes are often found 	 Evaluate the impact that a transnational company can have on a location. Suggest some possible advantages and disadvantages for the host nation (6) Assess the impact of aid in an
	in areas trying to escape poverty. Explain what is meant by 'self-help' (2)	LIDC you have studied. (6)
ost appropriate?		
	- Why can bilateral aid, also known	 Sometimes nations employ
d disadvantages of one top-down and one ountry.	as tied aid, be a problem for the country receiving it? (3)	different strategies to help reduce poverty. These can be classed as top-down or bottom-
	- Explain the difference between top-down and bottom-up	up. Discuss the advantages and disadvantages of each type of
	development strategies. (4)	to be more effective long term. (8)
		- With reference to a named LIDC example, describe how either a top-down or bottom-up strategy has led to improvements in living conditions for the local population. (6)
	ce its development? trade, such as potential reliance on a single, w this influences development. of trade and Trans National Company (TNC) t. antages of international aid or debt relief ost appropriate? ad disadvantages of one top-down and one ountry.	 ce its development? trade, such as potential reliance on a single, w this influences development. of trade and Trans National Company (TNC) t. antages of international aid or debt relief Self-help schemes are often found in areas trying to escape poverty. Explain what is meant by 'self-help' (2) ost appropriate? Why can bilateral aid, also known as tied aid, be a problem for the country. Explain the difference between top-down and bottom-up development strategies. (4)

UK IN THE	From the exam specification	Short questions	Long questions

		concentrations of elderly people in the	you have studied. (o)	
		South of England2 (4)		
		- What health and lifestyle changes are		
		responsible for people living longer		
		today than in the past? (3)		

	 c. How is the UK's economy changing? Identify major economic changes in the UK since 2001 by examining changes in the job market including political priorities, changing employment sectors and working hours. Investigate the pattern of core UK economic hubs. Identify the changes in one economic hub and its significance to its region and the UK. 	 Describe how the UK's employment structures have changed since 2001. (3) How do big infrastructure projects such as crossrail help to boost the economy? (4) Suggest how changing political priorities might have affected the UK economy since 2001. (4) Describe what an economic hub is. (2) 	 For an economic hub you have studied, discuss how its economy has changed over time (6 marks) For an economic hub you have studied, explain its significance to its region and the wider UK (8)
7.2 Is the UK losing its global significanc e?	 a. What is the UK's political role in the world? Examine the UK's political role in one global conflict through its participation in international organisations. 	- Name one international organisation of which the UK is a member. Explain the purpose of this organisation (4)	- For a global conflict you have studied, explain how the UK played a role through its involvement with international organisations. (8)
	 b. How is the UK's cultural influence changing? Explore the UK's media exports and their global influence including television programmes and film. The contribution of ethnic groups to the cultural life of the UK through one of food, media or fashion. 	 Suggest reasons why the sale of UK television programs to the US is so high. (4) Why do you think China is importing far more UK television shows? (3) Describe how ethnic groups have contributed to the UK through either food, media or fashion. (4) 	 Explain how media exports might encourage people to visit the UK. (6) Explain how UK media exports can have a global influence. (8)

RESOURCE	From the exam specification	Short questions	Long questions
RELIANCE		(1-4 marks)	(6-8 marks)
8.1. Will	a. How has increasing demand for	Using Fig 1 and your own knowledge, describe how changes in global	There are various different
we run out	resources affected our planet?	population are affecting demand for resources (3) – Fig is of	methods for producing energy.
of natural		population vs year	Choose two of the following
resources?	 Outline the factors leading to 		methods and evaluate their
	demand outstripping supply of	Outline one other factor that is affecting global demand for resources	advantages and disadvantages:
	food, energy and water.	(2)	nuclear power, natural gas, coal
	Overview of how environments and		mining, oil drilling, geothermal
	ecosystems are used and modified	Describe the environmental impact of changing farming practices (3)	energy, hydro-electric power. (8)

	 mechanisation of farming and 	Describe how deforestation can increase energy supply (3)	
	commercial fishing to provide food		
	 deforestation and mining to 	Outline the environmental impacts of mining fossil fuels to increase	
	provide energy	energy supply (4)	
	 reservoirs and water transfer 		
	schemes to provide water.	Other than water transfers, describe one large-scale way of increasing	
		water supply and explain now it could help make water supply more	
		Suggest reasons why pepulation growth has led to resources	
		becoming exhausted (2)	
		becoming exhausted (5)	
		Describe two impacts of commercial fishing on ocean ecosystems (3)	
		besche two impacts of commercial fishing on occan ecosystems (5)	
		Describe two ways in which ecosystems are altered by obtaining	
		energy supplies (4)	

8.2. Can we feed nine billion people by 2050?	 a. What does it mean to be food secure? Understand the term 'food security' and the human and physical factors which influence this. How world patterns of access to food are illustrated, such as the world hunger index and average daily calorie consumption. Investigate the differences between Malthusian and Boserupian theories about the relationship between population and food supply. 	Using Fig 1, describe the distribution of countries that produced less than 2.8 million tonnes of cereals from 2012-2014 (2) – Fig is world map with cereal production by country Explain the physical factors that can contribute to food insecurity (4) Explain the human factors that can contribute to food insecurity (4) Describe what it means for a person to be food secure? (2) With reference to both Physical & Human factors, explain why food security is a growing issue for many countries, both LIDCs and ACs (4) How is the World Hunger Index calculated? (2)	Compare Malthus's and Boserup's theories about how population growth and food availability are linked (6)
	b. How can countries ensure their food	With reference to a country you have studied, outline the problems	For a country you have studied,
	security?	that it faced when trying to feed its population both now and in the	evaluate the success of a local-
